

Lesson Plan 04, ISTA-322 Cohort 3

Chapter 4, Professional ASP.NET MVC 5

October 2, 2017

1 Discussion Questions

Chapter 6 Pages: 137 — 158

1. Why do we want to validate user input on the client? Why do we want to validate user input on the server?
2. In ASP.NET MVC, what data items are the focus of validation?
3. Where do data annotations live in the .NET framework?
4. Can you stack multiple validation attributes with regard to actions? If so, how many can you stack?
5. Explain the syntax of `[remote]`. What does it do?
6. What is a *server callback*?
7. What is a *model builder*? When does it run?
8. What is the *model state*? When is it created? How is it created? What does it contain?
9. What does the controller action method generally do if the model state is not valid?
10. What are the two options for custom validation? Explain your answer.
